Comments: I am sending this e-mail to state my opposition to the transport of nuclear waste thorough very populated areas. The site may be safe but the routes are not. Just today 3-31-00 an inspection of CSX rail sites indicated a 60% defect rate on the rails on the east coast. All the rails are probably in the same shape. This waste must not pass through populated areas. Please heed common sense. If this stuff does go, it should be under heavy guard at slow speeds through sparcely populated areas. Thank you, B. John
